EDUCATION

Laguna State Polytechnic University

Bachelor of Science in Computer Engineering

Laguna, PH

Aug 2022 – Jun 2026

EXPERIENCE

Junior Web Developer Intern (OJT)

Feb 2026 – Mar 2026

RGRR Webmaker

Quezon, PH

- Built a multi-tenant SaaS appointment booking platform for small businesses by developing both the client and customer dashboards using Next.js 15, TypeScript, Tailwind CSS, and Supabase
- Ensured codebase stability and team workflow efficiency by leading Git repository management, reviewing pull requests, and resolving merge conflicts across a collaborative team
- Delivered seamless full-stack integration by coordinating with backend developers to connect Supabase SSR authentication and REST API endpoints to the frontend

PROJECTS

Smart Shoe Care Machine | *Next.js, TypeScript, PostgreSQL, ESP32, Kotlin*

Oct 2025 – Jun 2026

- Delivered an end-to-end IoT shoe care kiosk supporting cleaning, drying, and sterilization by integrating ESP32 firmware, a Next.js web dashboard, and an Android kiosk launcher app
- Enabled real-time AI shoe classification by connecting an ESP32-CAM to the Google Gemini API for automated shoe type and condition detection
- Streamlined cashless transactions by integrating PayMongo QR code payment processing into the kiosk flow

BookNGo | *Next.js 15, TypeScript, Supabase, PostgreSQL, Tailwind CSS*

Feb 2026 – Mar 2026

- Built a multi-tenant SaaS appointment booking platform for small businesses by developing both the client dashboard and public customer booking pages using Next.js 15 and Supabase
- Ensured codebase stability by leading Git repository management, reviewing pull requests, and resolving merge conflicts across a collaborative team

VitaLink AI | *Next.js, FastAPI, ESP32, Scikit-Learn, PostgreSQL, Tailwind CSS*

Oct 2025 – Jan 2026

- Built a real-time student health monitoring system by integrating MAX30102 and MPU6050 sensors on an ESP32 with a live web dashboard
- Detected abnormal health patterns by implementing an Isolation Forest anomaly detection model using Scikit-Learn on live sensor data streamed from the ESP32

StackWars | *Arduino, C++*

May 2025 – May 2025

- Built a two-player competitive stacking game by programming non-blocking concurrent logic on Arduino to independently drive two LED matrix displays simultaneously
- Awarded Master of Sensors 2025 for outstanding implementation

Sign Language Translator App | *Kotlin, Jetpack Compose, MediaPipe, Python, Blender*

Feb 2024 – May 2024

- Developed a mobile application that translates text to sign language and recognizes sign gestures to text by implementing Google MediaPipe hand landmark detection on Android using Kotlin and Jetpack Compose

Smart Face Shield | *Arduino, C++*

Aug 2021 – Jan 2022

- Built an Arduino-based smart face shield with automated temperature scanning and monitoring by integrating thermal sensors into a wearable hardware prototype
- Awarded 3rd place at CHEin Reaction Robotics Category 2022 and 2nd place at LIKHA Robotics Category, Division Science and Technology Fair 2022

TECHNICAL SKILLS

Languages: TypeScript, Python, Kotlin, C/C++, SQL (PostgreSQL), JavaScript, HTML/CSS

Frameworks: Next.js, React, Tailwind CSS, FastAPI, Prisma, Jetpack Compose

Developer Tools: Git, GitHub, Vercel, Render, Neon DB, Supabase DB, Arduino IDE

Libraries: Scikit-Learn, Recharts, React Hook Form, Zod, Framer Motion
